DETAILED ACTION

Allowable Subject Matter

1. Claims 1 & 4 are allowed.
2. The following is an examiner's statement of reasons for allowance: This invention deals with an electrical cable having a conductor core and a sheathing layer covering the core, the sheathing layer made of a synthetic resin material and having an outer surface with a mono-color, the cable comprising: a first mark having a first color and provided on a first part outer surface portion of an outer surface of the sheathing layer, and a second mark having a second color and provided on a second part outer surface portion of the outer surface of the sheathing layer, wherein the second color is different from the first color, and the second part outer surface portion is positioned ~ opposite side~the first side outer surface portion in a circumferential direction of the cable, the first and second marks positioned at an end of the cable so as to be opposite to each other in relation to an axial center of the cable, wherein the sheathing layer of the cable has the first and second outer surface portions each extending in a longitudinal direction of the cable, at least one of the first and second outer surface portions is provided with a plurality of the first and second marks that are alternately positioned in the longitudinal direction of the cable, and the first mark is longer than the second mark in the longitudinal direction (claim 1). The above stated claim limitations is not taught or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

3. Applicant's arguments filed June 27, 2008 have been fully considered and they are persuasive. Specifically, the applicant's argument that "Masuda et al. nor Konda teach the claimed "a first mark having a first color and provided on a first outer surface portion of an outer surface of the sheathing layer, and a second mark having a second color and provided on a second outer surface portion of the outer surface of the sheathing layer, wherein the second color is different from the first color, and the second outer surface portion is positioned opposite the first outer surface portion in a circumferential direction of the cable, the first and second marks positioned at an end of the cable so as to be opposite to each other in relation to an axial center of the cable", as presently claimed" is persuasive and therefore claims 1 & 4 have been allowed.
